Performance Test Analysis (k6 Results)

Test Overview:

A load test was executed on the **DummyJSON API** to evaluate its stability and response time under concurrency.

Before the load test, a smoke test was successfully run to verify the script correctness.

Configuration:

- **Virtual Users (Vus):** 15 concurrent users.
- **Duration:** 30 seconds.
- **Protocol:** HTTP/HTTPS (Login POST + Authenticated GET requests).

Key Findings:

1. **Stability:** The API handled the traffic perfectly with a **%0.00 Error Rate**, successfully passing the failure threshold.

2. **Response Time:** The 95th percentile (p95) response time was 32365.ms, which is exceptionally fast and well below the acceptable limit of 3000ms.
3. **Throughput:** The system processed approximately **27 requests per second** without any timeouts.

Conclusion:

The API is highly stable and performant under a load of 15 concurrent users.

No bottlenecks were observed during the test window.
